

## ZENNER Touch Pad for Water Meters with Encoded Output

**APPLICATIONS:** The ZENNER Touch Pad is used for electronic meter reading systems where the meter is not easily accessible. The Touch Pad cable is attached to a remote module, such as a ZENNER ETR Encoder. The Touch Pad is typically mounted in the top of a meter box lid, using the included housing and nut, allowing for easy communication with a compatible reading device.

**COMMUNICATION:** Communication is accomplished by using compatible reading devices programmed to read Sensus protocols, such as the VersaProbe™ or Metre Pro's™ reading wands, to interrogate the remote module. For more consistent results, the reading device should be placed in direct contact with the Touch Pad.

**CONSTRUCTION:** Size of the Touch Pad is 3.0" Long X 1.1" OD with 12 feet of attached three wire cable. Weight is 6oz. Environmentally sealed to keep the Touch Pad waterproof. Operating temperature is -4 to 140 °F (-20 to 60 °C).

**WIRING:** For connection to the remote module there are three wires: Red (Clock), Green (Data) and Black (Ground).
